

Home water conservation • tips

Water conservation can add up to \$100s per year.

Here's how you can save.

Upgrade toilets to a 4.8 L/flush model.

Switch to **low flow showerheads** and **tap aerators**.

Look for products with the WaterSense label!

Water lawn on **designated dates and times** as set out by Region of Waterloo Water Conservation By-law, in effect May 31 to Sept. 30. Learn more by calling 519-575-4400.

Rain is often enough

An inefficient water softener wastes water.

Only soften your home's hot water.

Try Watersoftenerfacts.ca

Use a **rain barrel** or rain harvesting equipment.

Every year, **check for leaks**. The main culprits are toilets, faucets, water filtration systems, water softeners, and outside hoses and valves.
