WILLIAM ST. RECONSTRUCTION PROJECT
UPDATE ON NIGHT WORK
MAY 01, 2019

Schedule

The work in the Arthur St intersection revealed some problems with the locations of existing pipes, and most recently rain has shortened the time available to complete what was planned each night. As a result, we have worked two additional part nights and need one more.

The Region has extended the closure of Arthur St during night time hours through the night of Friday, May 3rd. This allows the contractor to pick one night that is dry within that period. Looking at the forecast, the contractor believes that the night of May 1st will be suitable and plans to complete the underground work before the 6:00 a.m. time limit. Should the weather not be suitable, another night will be tried.

Emergency Vehicle Access

Ongoing communication is occurring with emergency service providers to ensure that they are aware of the construction activity and are kept up to date with respect to access and any temporary road closures.

Service Interruptions

The work on Arthur Street is very localized and due to the configuration of the underground services, no interruptions of service to homes are expected.

Noise

Similar to the two nights of work completed, construction noise will occur on the two extended nights. As before, the Contractor works to minimize noise as much as possible by not slamming truck tailgates, minimizing backing up vehicles with beepers, shutting off heavy equipment when possible, etc. These efforts should keep noise levels reasonable for most of the night.
Communication

If you have any questions or concerns during the course of this project, please contact the people noted below. Site representative Paul Gregorio will be aware of current conditions and will be your best contact for site related issues.
